54/5 as it plans or ideas are generated elsewhere, but turned into tangibility here.

precision
measuring
meticulousness
professionalism

54/2 people working here have sense of pride, of being elite - the best in the field at what they do; but what they do is "technical" type things -

items
made

practical
testing

assess
results

54/2 used to determine if the results meet projected expectations.

No apparent common theme to objects and items "made" here. If something needs to be fashioned, no matter what it is, this place is called upon to do it.

54 1/2 - "like" metal shop for post engineers. Its purpose is not to make just rain gutters or ~~roof~~ roof vents, but to make anything having to do with metal from all over post; in great variety.

architecture similar to structures at nuclear kaserve. It is surrounded & sequestered. On 2nd Floor activities occur that are separate & autonomous from rest of structure. Heavy sense of technical & research. People there are of various types & very various things. Several different projects both related & unrelated are being carried on at the same time.

area #5 involves a structure itself involving metal construction, rounded, ~~but~~ curved, with varied elements. People working are highly motivated, intrigued, challenged, proud of their work & feel they're among the best there are at what they do. They're skilled craftsmen or technicians who specialize in turning plans or concepts into tangible things. ~~There~~ there's a sense of "one of a kind" fabrication, as in prototype-construction. Items are made here to test out performance & capabilities previously projected or calculated in plans or on paper. A wide variety of things are made - this "shop" is not ^{concerned} with specialized production but can do "any thing." The concept of "floors" is not particularly relevant to this part of site.
